CHRISTMAS TREE

Follow the instructions below to create your own strip Christmas Tree.

YOU WILL NEED

- 15 strips of coloured paper
- Rectangular base of the tree
- An extra sheet of paper on which to glue your tree

INSTRUCTIONS

1. Cut out each of the 15 strips of coloured paper at the bottom of the page and the rectangular base of the tree.
2. Glue the tree base in the middle of the bottom of your page.
3. Create your tree by gluing your coloured strips above the trunk. Begin at the base with the longest strip, and glue it diagonally towards the middle of the tree making sure it touches both sides of the tree.
4. Add the remaining strips making sure each new strip slightly overlaps previous strip. Place each one at a slightly different angle, gradually shortening their lengths to form a triangle shape (tree shape).
5. Keep layering the strips at fun angles until you reach the top, using your shortest strips last.
6. When finished, decorate the top of your tree with the yellow star.
