

MATCHING

Match words to their meaning.

Chlorophyll ●

● A change that helps plants or animals survive better in their environment.

Clone ●

● A green substance in plants that helps them turn sunlight into food.

Organelles ●

● A plant or animal that is exactly the same as its parent.

Adaption ●

● Tiny parts inside plant and animal cells that help the cell to live and grow.

Photosynthesis ●

● The way plants use sunlight, water, and air to make their food.

Pollinator ●

● Tiny powdery grains made by flowers, needed to produce seeds.

Tepal ●

● An insect or animal, like a bee or bird, that carries pollen from one flower to another.

Sepal ●

● Small leaves around a flower bud that protect it before it opens.

Pollen ●

● When two different living things help each other to survive.

Symbiosis ●

● A part of some flowers, like lilies, where the petals and sepals look exactly the same.
